EDUCATION

University of Toronto

Expected Graduation: 2029

Bachelor of Applied Science in Computer Engineering

Toronto, Ontario

- **Relevant Coursework:** Programming with C, Object Oriented Programming (C++), Linear Algebra, Digital Systems
- **Honours:** Dean's Honours List (2x) | **GPA: 3.60**

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL, Java

Frameworks & Libraries: Spring Boot, FastAPI, Express.js, Node.js, Pytest, LangChain

Tools: PostgreSQL, Redis, Docker, Kubernetes, AWS (EC2, S3, Lambda, EKS), Git, GitHub Actions

EXPERIENCE

Software Engineering Intern

May 2026 – September 2026

University of Toronto

Toronto, Ontario

- Built **Express.js** APIs with **PostgreSQL** and **Redis** caching for instructor analytics, cutting P95 latency by **57%**
- Shipped a **Three.js** digital twin across **3 BME courses**, replacing **3 hours** of in-lab training per student
- Built a **Qwen 2.5 RAG** pipeline for lab scenarios that cut generation time by **40%** and saved instructors **1hr/scenario**

Software Developer Intern

Jan 2026 – Apr 2026

Ontario Online Schools | Riipen LevelUP Jan 2026 Cohort

Toronto, Ontario

- Built **Express.js** APIs on **Node.js** for authentication and course access, cutting access provisioning time by **45%**
- Implemented signed, retry-safe **Stripe webhooks** to automate payment verification for **40+ student enrollments**
- Cut deployment time by **70%** by building a **GitHub Actions** CI/CD pipeline with **20+ unit tests**

Game Developer Intern

Feb 2024 – June 2024

GamePill

Concord, Ontario

- Debugged **20+** gameplay issues in Unreal Engine (**C++**), reproducing defects and tracing root causes through logs
- Logged **150+** bugs and improvement proposals with reproducible steps and context, accelerating development by **15%**
- Accelerated QA turnaround by **20%** across **12+ pre-release builds** of HANGRY ahead of its IGN showcase

PROJECTS

Agentigram - 1st Place, Hack the North | *TypeScript, Node.js, Pear*

- Built a serverless peer-to-peer dev tool that coordinates coding agents across machines using **Pear**
- Built real-time file and symbol-level conflict detection, catching cross-agent conflicts in under **300 ms**
- Won **\$1,000** Best Sovereign Tool Track at Hack the North, Canada's largest hackathon, among **1,000+ participants**

Traffer: Containerized Traffic Monitoring Pipeline | *Docker, Kubernetes, PyTorch, FastAPI*

- Served a **PyTorch Faster R-CNN** object detector with **FastAPI**, streaming detections through **Redis** for real-time alerts
- Reduced **Docker** image size by **39%** with multi-stage builds and deployed the inference service on **Kubernetes**
- Automated CI/CD with **GitHub Actions**, running **58 Pytest** unit tests at **96% coverage**

Haggle - 2nd Overall, Cursor x Toronto Tech Week Hackathon | *TypeScript, ElevenLabs, Twilio*

- Built a voice-first shopping agent that turns requests into outbound negotiator calls and returns results in-app
- Integrated **ElevenLabs** and **Twilio** for autonomous phone calls, using webhooks to return transcripts and call outcomes

Ledger: Event-Driven Payment Reconciliation | *Java, Spring Boot, Kafka, PostgreSQL, Redis, Docker*

- Built **Spring Boot** microservices for payments, reconciliation, and exceptions using **Kafka**
- Processed **10K+ transactions/min** at **<150 ms P95 latency** using concurrent **Kafka** consumers and async processing
- Implemented idempotent consumers, retries, and dead-letter queues, eliminating duplicate writes in **100% of replay tests**
